

NATURAL VASELIN TYPE A

PROPERTIES

NATURAL VASELIN TYPE A is a COSMOS approved and VEGAN compliance semi-transparent emollient of vegetable origin proposed as alternative to synthetic Petrolatum.

Comparative hydration studies have been performed between **NATURAL VASELIN TYPE A** and Vaseline Codex. Results have shown immediate and significant moisturization performance similar to petrolatum whilst TEWL tests indicate lesser occlusivity for the vegetable version.

NATURAL VASELIN TYPE A shows a viscosity building effect, more efficient than Vaseline codex. It provides a rapid viscosity stability in the end product, also over a long period.

NATURAL VASELIN TYPE A reproduces the touch, the appearance and the substantive after-feel of petroleum jelly. All these characteristics make **NATURAL VASELIN TYPE A** an ideal natural hydrating agent.

Based on vegetable triglycerides, it soothes the skin without blocking pores. **NATURAL VASELIN TYPE A** is non-irritant. It helps to protect skin from exposure to the environment and leaves a water resistant film on the skin, similar to the action of Petrolatum.

NATURAL VASELIN TYPE A is exempted of food contaminants and has been tested safe for oral mucosa.

COSMETIC APPLICATIONS

- Intensive moisturising creams
- Night creams
- Sun care and after sun creams
- Body milk
- Baby products

TECHNICAL DATA

Appearance:	Semi-solid transparent gel
Required HLB	8 (Required HLB petroleum derivative = 6-10)
INCI	Ricinus Communis Seed Oil (and) Hydrogenated Castor Oil (and) Copernicia Cerifera Cera
